

Below is a **tight 20-question core set** selected from that popular Top 75 gist, with the goal of covering the **widest range of solution patterns** instead of repeating near-duplicates. The gist itself is organized as a pattern-teaching list, so I picked the subset that gives a graduate the best pattern diversity per problem. ([Gist][1])

1) Hashing / array thinking

- [Two Sum](#)
- [Product of Array Except Self](#)
- [3Sum](#)

2) Binary search on “non-obvious” sorted structure

- [Search in Rotated Sorted Array](#)

3) Sliding window

- [Longest Substring Without Repeating Characters](#)
- [Minimum Window Substring](#)

4) Stack

- [Valid Parentheses](#)

5) Linked list pointer patterns

- [Reverse Linked List](#)
- [Remove Nth Node From End of List](#)

6) Tree traversal + BST reasoning

- [Maximum Depth of Binary Tree](#)
- [Binary Tree Level Order Traversal](#)
- [Validate Binary Search Tree](#)

7) Graph traversal + graph modeling

- [Number of Islands](#)
- [Clone Graph](#)
- [Course Schedule](#)

8) Intervals

- [Merge Intervals](#)

9) Backtracking / search in grid

- [Word Search](#)

10) Dynamic programming + greedy

- [House Robber](#)
- [Coin Change](#)
- [Jump Game](#)
